CyberScrub Privacy Suite

Professional is a Windows application that deals with cleaning traces of your online activity and wiping out files permanently from your computer so they cannot be recovered using dedicated tools.

Remove online and Windows activity The GUI looks straightforward and allows you to choose between several deletion

tasks. You can also consult a help manual in case you have questions regarding the program's deletion capabilities. The application allows you to choose between a basic and advanced cleaning mode. The basic one comes with preset settings, while the advanced mode gives you full control over the items that you want to remove. You can delete

files that belong to Windows data (e.g. memory dumps, recently used documents, invalid shortcuts, clipboard data, application logs), browsers (e.g. Internet Explorer, Firefox, Opera, Safari, SeaMonkey), software programs (e.g. BS.Player, Pidgin, WinRAR), peer-to-peer clients (e.g. uTorrent, eMule, BitComet), news and email

readers (e.g. Eudora, Thunderbird, Pegasus Mail), as well as custom files and folders. Secure cleaning and extra tools to manage email clients You can delete files and folders from your computer using secure cleaning tasks. There's support for multiple wiping algorithms with different passes, such as quick wiping (one pass),

(NAVSO PUB) 5239 with 3 passes, Schneier with 7 passes, DoD (13 passes) and others that may have up to 35 passes. Advanced users may even define their own wiping method with custom number of passes and deletion patterns, as well as include or exclude files in/from the deletion process. CyberScrub

Privacy Suite Professional offers you the option to destroy all files from the Recycle Bin and erase the deleted information from custom drives. You can make the tool wipe the free (unused) disk space and slack of existing files, as well as scramble deleted files and folders properties (e.g. name, date, size) and transaction log files (on NTFS

drives only). You are allowed to erase deleted email from different clients, such as Outlook Express, Thunderbird, Pegasus Mail, IncrediMail, and web-based email programs such as Yahoo!, Gmail and Hotmail. In addition, you can schedule the deletion process to take place daily, weekly or monthly, and create an encrypted

folder where you can password-protect sensitive files. A handy program that

Keymacro is the ultimate keyboard macro recorder, recorder, and editor. You can customize everything in this program. You can assign hotkeys to any function

and even automate any repetitive actions. Keymacro uses mouse and keyboard only and no menus, dialog boxes, or other user interface to configure what it does. It's intuitive and easy to use. You just choose a macro from the list, record it, then edit it and save. It's easy to configure and also has a lot of powerful features.

KEYMACRO Keystroke Manager:

The keystroke recorder and manager allows you to record your keystrokes. There are 2 functions in this program: Recorder and Editor. In the recorder, you can record any keystrokes by choosing which hotkeys you want to use, when they occur and the duration you want to record for. In the

editor, you can edit what you recorded. For instance, you can add or remove hotkeys and add keystrokes, such as moving your mouse pointer or selecting a file or folder, etc. You can also add an action that will be triggered when a keystroke you've recorded is pressed. In addition, you can set an "Onboard Shortcut" and assign it to

a keystroke. For example, if you are recording a macro for Windows, you can use the Command + S shortcut to save the current file. Once you are done editing, you can save your macro as a "Storable Macro". You can also save the macro in a file if you want to use it for something else. You can also edit text or edit any of the

macros that you have recorded. Keymacro also features a user interface that makes the program very easy to use. In the user interface, you can configure your macros, hotkeys and keystrokes. You can easily change the settings, and you can also delete the settings that you've already created.

KEYMACRO Macros - Record,

Manage, and Edit Macros: -
Record - Record any keystrokes you want and set up the duration you want them to be recorded for. -
Manage - Define your own hotkeys and create and save macros. - Edit -
Edit any macros that you have already created. Keyboard Macro Recorder is a program designed to make it easier to use Windows and

web browsers. It will record any keystrokes on your keyboard as text strings, including Windows hotkeys. It will record hot
