Well Logger is a useful application specifically designed for project engineers and geologists for calculating soil boring log and well construction diagrams. Highly customizable page layout When creating or editing a boring, you can add a multitude of lines with variables, and more than half of the variables can be user-defined. This way, you can cover the whole depth of the boring well with a complete layered lithology report The user interface seems easy to understand, even though the software is specifically addressed to engineers and geologists. Well Logger allows you to open multiple files at once, so you do not have to close your project in order to access or modify a previous one, or to create a new boring log. In-depth description For each layer, you can type in a short description of the types of rocks and sands encountered when digging. You can assign a classification from the drop-down menu for each rock layer, such as asphalt, breccia, conglomerate, dolomite, limestone, shale, mudstone siltstone and many other types of rock. Detailed charts For each boring, you can add detailed information about the project. You can select the start and the end dates of an assignment, as well as the name of the supervisor. On the same virtual chart, you can add information about the name of the company, license number and the driller name of the drilling contractor. You can also specify the depth, ground elevation or the amount of water encountered when drilling the well. The measurements can be done in either in feet or meters. Information about the location of the project, with exact latitude and longitude can be input, allowing you to have a complete overview of the project. Conclusion Well Logger is an advanced and useful application for geologist and construction engineers, in order to draft complex boring logs and well construction diagrams. The intuitive interface makes the program easy to handle and a reliable tool for creating an in-depth report of the project. And, can you please tell me the steps to do so? Regards, DZHAR Excel automation – converting date format Please help with converting date format from " dd/mm/yyyy" to " mm/dd/yyyy" Answered by... Hello, Thanks for writing to SysSupport. We can help with the formatting of dates in an Excel cell. If you have two columns of dates in a column, where you want to change the date format from " dd/mm/yyyy" to " mm/dd/yyyy" then you would want to use a VLOOKUP function. However, if you only have one column of dates, then you want to use a single formula that will work on all the dates. In such a case, you would just need a simple formula like: =DATE(LEFT(A1,4),MID(A1,5,2),RIGHT(A1,2)) The formula would look like this: =DATE(LEFT(A1,4),MID(A1,5,2),RIGHT(A1,2)) The first part of the formula, where you 77a5ca646e
