If you are a professional photographer and use Photoshop for high-end work, you can spend \$1,500+ on a full version that will allow you to use every tool and feature. The professional version is generally much more expensive and comes with many features not available in the standard version. If you are a hobbyist and do not have the budget to buy a full version, you can use Photoshop Elements to run your own business. Table of Contents How Photoshop Elements Works The standard version is usually a free download from Adobe. You can download both the Windows and Mac version of Photoshop Elements for free. Because the Elements version is free and limited to basic use, it is easy for photographers and designers to start using it and get a feel for how it works. You can use it to edit basic images to run a small business if you only need a few basic features. On the other hand, if you have the budget, you can use a paid version to get as many editing tools as you need. The full version has hundreds of features, including: Separating background and subject Blending tools Highlight-fade tools Custom painting Advanced editing Smart objects and layers Smart Filters Custom lens corrections Pinch zooming Improved image selection tools There are other features available in other versions of Photoshop, but Photoshop Elements is the easiest to use and is the free version you will probably want to use. It is like a stripped-down version of Photoshop, with fewer features, simpler controls and fewer features (see here for a comparison of the two apps). You will still use the same tools as you would in Photoshop, including the Brush, Lasso tools, Pen tools and the Brush tool (not all of the brushes are available in Elements). When you open Photoshop Elements, the startup screen looks like this: The right side has most of the features you would find in a standard version. There is the tools panel, the workspace, the menus, a window with options (the layer menu), a menu with other features and a button to open a Tutorials menu. You can use the tools panel to change the tools (color 05a79ccff
