. The iPhone itself has very little or no battery life at all, so if you are looking to rely on it for work, consider using a second battery. However, there is a PC connector on the back that will connect to a standard 2.5A power supply that will provide you with a little extra power. The bottom line There are a few caveats to the iPhone 3GS as a device for work. The most important of those, for me, is that you have to live with the form factor. Apart from that, the phone does everything that I need to do well, but it is a bit short on memory and processor power. That being said, I love the iPhone and I think that it is a great device for a lot of people. I would just like to see the iPhone more capable of multitasking. The iPod touch is an extremely capable device and has a whole host of multitasking and multimedia features. The iPhone doesn't even have a camera – there is a good reason for that. This post was originally published on April 26, 2009. In 2009 and 2010, I had an iPhone 3G. I recently decided to finally upgrade to the iPhone 3GS and I have to say I'm very happy with my decision. As an iPhone fanatic, I am always on the lookout for any iPhone users willing to get into the gaming community. In particular I'm looking for players who play on iPhone specific sites like iTap or GameDeck. Both of these sites have regular online gaming tournaments taking place. Unfortunately, none of the people I have asked have a 3GS. All have either an iPhone 3G or even an iPod touch. With the release of the 3GS not far off it makes me think of writing about it and giving potential iPhone gamers an idea of what this hot new device is capable of. So, this is my first ever attempt at a review. I have to admit it was much easier than I thought it would be. Most of the game I have reviewed was free and just required that you register an account before you can play, so it was very easy to get started. One thing I was not prepared for was the quantity of the game library.

Q: Is there any difference between "X" and "X-SOMETHING" in jQuery? I've seen "X", "X-SOMETHING" and "X-SOMETHING" in jQuery. Is there any difference between them? Like the "X" means "not empty" and so on, I'm just interested in the 1st, 2nd and 3rd one. A: From the jquery.com site: By using a dash as the prefix for CSS- and JavaScript-specific properties and functions, you can more clearly express your intent to apply properties to elements whose class name contains the value specified, and you eliminate the need to create an explicit element via \$. So, by adding - to the class name of an element, you are requesting it will be matched by the stylesheet. A: According to the link posted in the answer by asto I was wondering why that is? So, I did a little research and found the following: jQuery states that an ID can be either "X" or "X-", a class can be either "X" or "X-" and a selector can be either "X", "X-" or "X-X". Therefore, one can easily determine by looking at the syntax which one is looking for. For example, in the following selector: \$('#course_form input[value="+course.title+"]'); What the jQuery documentation states would look like is this: \$('#course_form input[value="+course.title+"]'); This is a no-duh statement by jQuery, but it's worth nothing. A: the x in \$('#idx') is selector id not the css selector. the x- in \$('#idx')-something means that the actual id is not needed in the selector. in the role of mediator and leader; it would appear that real power lies with a possible return to the bloodline, something which has not happened since the Ottoman Empire.
