What's New In Cross A?

Cross + A is an application designed to help create and solve word-based puzzles: Crossword, Anagram, Rubik's cube, etc. It consists of two main features. The first one is related to creating puzzles. You can change the size of the puzzles in 0.1-4.0 mm steps. The second one is related to solving puzzles. It enables you to find the answer to a puzzle by displaying a slide show of the letters arranged into a crossword, anagram, or any other puzzle you've selected. The application offers a wide range of different tasks that include creating, solving, comparing, and editing puzzles, as well as importing words or files into it. It's great to have a universal dictionary with over 200,000 words, helping you to find the right word for any puzzle you might have. You can start to search for a word from the list of words already stored inside, make your choice and press the "Add to Dictionary" button. You can also add words to the dictionary by directly typing in a note (notes are very useful in solving puzzles, as some letters might be similar to another word and could lead to a wrong answer). Once you've added words to the dictionary, they can be used in any game you want to play. After you've selected the desired puzzle type, you can start editing it by adding, deleting, or changing words. You can replace words with the currently selected word, edit descriptions and assign labels for the words inside. Before solving the puzzle, just press the "Solve" button. A list of similar words will show up, which will help you find an anagram for the word you've chosen. You will be able to save the created puzzle into a file and edit it later, set the difficulty level, as well as print the puzzle. You can also create Sudoku puzzles for the game. If you're not satisfied with the puzzle, just cancel. You can download Cross+A from the Google Play Store. Download Cross+A: Visit Cross+A on Google Play New Crossword Has
